

Events Group Interview Round

Case:

You're a consultant for a skincare brand looking to break into the US college market. They're not well known outside a niche group of skincare enthusiasts and want to reach a more mainstream student audience. Their goal is to drive brand awareness/interest in one specific product while also growing their student ambassador program.

You're tasked with designing an activation that accomplishes both: drives interest in the product and recruits students into the brand's ambassador program. This can be one combined event, or two separate but connected events (ex: a smaller ambassador-focused event that feeds into a larger public event) — your choice, as long as the two goals work together rather than separately. Brainstorm:

- The campaign concept: format, activities, timing, and why you chose this structure
- How to encourage students to become ambassadors, and how the recruitment piece works alongside the product promotion
- How you'd measure success across both goals: what data proves the product promotion worked, what proves the ambassador recruitment worked

Part 1: Audience Research

- What information would you want to collect from Berkeley students before designing your activation?
- How would you collect it (surveys, interviews, focus groups, social listening, etc.)?
- What are 3–4 specific questions you'd ask students to gather that info?

Part 2: Campaign Concept & Ambassador Recruitment

- Ambassador pitch: How do you encourage students to want to become ambassadors, what's the pitch or incentive?
- Recruitment mechanics: How would you identify/recruit candidates (outreach, applications, referrals, etc.)?
- Format: One combined event or two connected events (one for ambassadors vs one for everyone)? Why that structure over the alternative?
- Activities: What would students actually do? Walk us through the flow (what happens first, centerpiece moment, takeaway)?

- Timing/Location: When and where would this run, and why does that fit a mainstream (not just niche skincare) audience?

Part 3: Measuring Success

- What data would prove the product promotion worked?
- What data would prove ambassador recruitment worked?
- If the two goals showed conflicting results, how would you interpret that?
